

Suspension **Type 2**

Type-2 cable suspension is a method of suspending FabricAir ducts. The cable is a PVC coated Stainless Steel or Galvanized cable making it an excellent choice for corrosive environments. The method involves stretching two horizontal cables, one at the 3 o'clock and one at the 9 o'clock positions. The horizontal cables are supported with intermediate vertical cable drops. The duct will have clips to hang the duct on the cable at the 3 and 9 o'clock positions. The length of the duct straps that hold the cable clips can be manufactured to specification.
